

Nicholls Design Care & Maintenance

Nicholls design Lacquer finish is a 2 pack lacquer system that provides a protective film over the top of the timber and should give you many years of wear however care should be taken not to drag hard objects on the surface as grit particles underneath object may cause scratching. The lacquer will protect your timber from the occasional spill however excessive exposure to moisture will cause problems. Place mats and drink coasters are recommended under warm/hot items to prevent ring marks.

Do not place your furniture in direct sunlight, above heating vents or next to radiant heat or where there is excessive temperature and/or humidity change.

To clean your furniture do not wet/soak the surface as timber does not like the moisture variation. You only need to wipe over with a damp cloth with a mild water based detergent. Do not use cleaning products that contain silicone, ammonia, citrus oils or abrasive powders.

Nicholls Design Oil finish uses a quality oil that will protect your furniture for many years. Oil penetrates the timber and gives a more natural look though it is more subject to moisture damage through spills and does require some maintenance though the big advantage is it much easier to repair. Nicholls design recommends re-oiling your timber every couple of years or when the timber begins to look dull. This is a quick easy process of simply wiping over your product with a soaked oil rag and wiping/buffing of with a clean oil free rag, the Livos oil has a pleasant citrus smell and is a pleasure to use. Refer to LIVOS Kunos counter top oil data sheet for more information. The maintenance and care is the same as the lacquer system above.
