Care & Maintenance

Care & Maintenance of finished stain veneered surfaces. Keep all stained veneered surfaces away from any water. If water is poured on the surfaces, it is necessary to immediately use a soft dry cloth to soak the water and later use another clean dry cloth to wipe off any remaining water residues.

Use clean water to slightly wet the clean soft cloth for daily cleaning of stain veneered surfaces. Avoid using aggressive detergent, acetone, solvents and abrasive cleaning agents on the surfaces. For greasy surfaces, we suggest to use standard glass cleaning detergent and the cleaning movements of the hand is to go-along with the grain direction of the veneer. It is necessary to slightly wet the cloth with the glass detergent and not spray the glass detergent onto the veneer surface. Do not place the furniture near fireplace or in areas above 45°Celsius as this may cause damages and deformation of the product.

Care & Maintenance of matt & glossy pigmented color painted surfaces. Similar to the Care & Maintenance of stain veneered surfaces and please pay attention to use "soft cloth" for cleaning.

Do note that rough cloth may create minute scratches on the surfaces and therefore it is important to use a soft cloth and do not apply too much pressure during the wiping process.

Special Attention: Our products are constructed with wood base materials like MDF (Medium Density Fiberboard) and wood, and therefore special attention is to be taken when cleaning the floor of the living space.

Do not have excessive water on the floor during cleaning as water is easily absorb into the MDF or wood and prolong/excessive absorption will cause deformation of the wood & MDF. Care & Maintenance of lacquered surfaces, glass, metal parts & marble top.

For general care, use a soft dry cloth to clean off dust. For fingerprints or slightly stubborn stains, we recommend to use standard glass cleaner detergent solution that does not contain solvents and/or spirits. Do avoid using cloths with hard fibers as they could ruin and/or scratch the surfaces. Do note that prolong exposure of the painted surfaces will cause discoloration of the painted surfaces.

For marble surfaces, it is important to note that it is best advisable to immediately clean off any dirt or stains that comes in contact with its surface so as not to allow the stains to penetrate into the marble. Cleaning should be done with a soft fiber cloth to take away the dirt/stain and later follow by a using a clean soft dampened cloth to clean away any remaining dirt/stain residue.

Disposal

Do dispose the product into an authorized disposal area. All removable fabric covers are to be dry clean only.
