

Strength test for chairs

Our chairs are always tested for safety according to DIN 13761. This test is necessary to obtain the GS mark.

The requirements of the dynamic overturning test are adapted to chairs for the commercial sector with a higher number of repeats (in total 80,000 cycles).

In general, chairs are tested for a maximum load of 120 kg.

The test is carried out on a test machine, which is internally licensed by BIFMA and regularly tested.

Furthermore products by the company Brunner are subject to high quality standards and are certified according to ISO 9001.
