# AXYL Chair

Zenith

## Features:

The Axyl chair is based around an inverted Y-frame which gives each product both a high level of structural integrity and a unique design language. The triangular elements have been engineered to provide maximum strength with the most efficient use of materials.

The chairs employ a unique recycled die cast aluminum Y-frame silhouette topped with a softly geometric injection moulded shell, which is designed to embrace the sitter, with an optional cushion. Axyl chairs stack four high to enable easy storage.

Axyl is made in the United Kingdom.

**Design:** BENJAMIN HUBERT FOR THE SENATOR GROUP
